The materials included in these files are intended for use by AP teachers for course and exam preparation; permission for any other use must be sought from the Advanced Placement Program®. Teachers may reproduce them, in whole or in part, in limited quantities for noncommercial, face-to-face teaching purposes. This permission does not apply to any third-party copyrights contained herein. This material may not be mass distributed, electronically or otherwise. These materials and any copies made of them may not be resold, and the copyright notices must be retained as they appear here.

These materials were produced by Educational Testing Service® (ETS®), which develops and administers the examinations of the Advanced Placement Program for the College Board. The College Board and Educational Testing Service (ETS) are dedicated to the principle of equal opportunity, and their programs, services, and employment policies are guided by that principle.

The College Board is a national nonprofit membership association whose mission is to prepare, inspire, and connect students to college and opportunity. Founded in 1900, the association is composed of more than 4,300 schools, colleges, universities, and other educational organizations. Each year, the College Board serves over three million students and their parents, 22,000 high schools, and 3,300 colleges through major programs and services in college admissions, guidance, assessment, financial aid, enrollment, and teaching and learning. Among its best-known programs are the SAT®, the PSAT/NMSQT®, and the Advanced Placement Program® (AP®). The College Board is committed to the principles of equity and excellence, and that commitment is embodied in all of its programs, services, activities, and concerns.

Work for problem 2(a)

(a) \[ v(t) = -(t+1) \sin \left( \frac{t^2}{2} \right) \]
\[ v(2) = -3 \sin(2) = -2.728 \]
\[ a(t) = -\sin \left( \frac{t^2}{2} \right) - (t+1) \cdot t \cos \left( \frac{t^2}{2} \right) \]
\[ a(t) = -\sin \left( \frac{t^2}{2} \right) - t(t+1) \cos \left( \frac{t^2}{2} \right) \]
\[ a(2) = -\sin(2) - 2(3) \cos(2) \]
\[ a(2) = 1.588 \]

The speed of the particle is decreasing at \( t = 2 \) because acceleration, the rate of change of the velocity, is positive while velocity itself is negative, meaning that speed, the absolute value of velocity, is actually decreasing.

Work for problem 2(b)

(b) \[ v(t) = -(t+1) \sin \left( \frac{t^2}{2} \right) \]
\[ t - 1 = 0 \]
\[ \sin \left( \frac{t^2}{2} \right) = 0 \]
\[ t = 2.507 \]

Reject - not in interval

Particle changes direction where \( t = 2.507 \)

Continue problem 2 on page 7.
Work for problem 2(c)

(c) Total distance traveled: \( \int_0^3 |v(t)| \, dt = 4.339 \)

Work for problem 2(d)

Greatest distance between particle and origin will occur where the function \( f(x) = 1 + \int_0^x v(t) \, dt \) achieves a relative max. or relative minimum.

Relative extrema:

\[
\begin{array}{c}
\text{relative} \\
\text{extrema}
\end{array}
\]

\[
\begin{array}{ccc}
& - & + \\
\int_0^{2.503} & 2.503 & 3
\end{array}
\]

\[
f(x) = \begin{cases} 
-2.266 
\end{cases}
\]

Distance between particle and origin = \( 1 + \int_0^{2.503} v(t) \, dt = 2.265 \)

GO ON TO THE NEXT PAGE.
Work for problem 2(a)

\[ v(t) = -(t+1)\sin\left(\frac{t^2}{2}\right) \]
\[ a(t) = -(t+1)\cos\left(\frac{t^2}{2}\right) \cdot t - \sin\left(\frac{t^2}{2}\right) \cdot t \]
\[ a(t) = 1.588 \]

Yes, the acceleration is positive. Therefore, the slope of the velocity is positive.

Work for problem 2(b)

\[ v(t) = -(t+1)\sin\left(\frac{t^2}{2}\right) = 0 \quad \text{at} \quad 0, +\sqrt{2\pi} \]
\[ \frac{t^2}{2} = \pi \]
\[ v(t) \leq -\frac{2}{\sqrt{2\pi}} \rightarrow \frac{1}{\sqrt{2\pi}} \]

The particle changes direction only at \(\sqrt{2\pi}\) because the velocity changes from negative to positive.

Continue problem 2 on page 7.
Work for problem 2(c)

\[ \int_{0}^{3} v(t)\,dt + \int_{2\pi}^{3} v(t)\,dt \]

\[= 4.334 \]

Work for problem 2(d)

\[ \int_{0}^{2\pi} v(t)\,dt = -3.265 + 1 = \boxed{-2.265} \]

\[ v(t) = \frac{1}{3} \quad \text{at} \quad 0, \quad \frac{2\pi}{3} \]

At \(\frac{2\pi}{3}\), the particle began to move towards the origin.
