AP® CALCULUS BC 2009 SCORING GUIDELINES (Form B)

Question 2

A storm washed away sand from a beach, causing the edge of the water to get closer to a nearby road. The rate at which the distance between the road and the edge of the water was changing during the storm is modeled by $f(t) = \sqrt{t} + \cos t - 3$ meters per hour, t hours after the storm began. The edge of the water was 35 meters from the road when the storm began, and the storm lasted 5 hours. The derivative of f(t)

is
$$f'(t) = \frac{1}{2\sqrt{t}} - \sin t$$
.

- (a) What was the distance between the road and the edge of the water at the end of the storm?
- (b) Using correct units, interpret the value f'(4) = 1.007 in terms of the distance between the road and the edge of the water.
- (c) At what time during the 5 hours of the storm was the distance between the road and the edge of the water decreasing most rapidly? Justify your answer.
- (d) After the storm, a machine pumped sand back onto the beach so that the distance between the road and the edge of the water was growing at a rate of g(p) meters per day, where p is the number of days since pumping began. Write an equation involving an integral expression whose solution would give the number of days that sand must be pumped to restore the original distance between the road and the edge of the water.

(a)
$$35 + \int_0^5 f(t) dt = 26.494$$
 or 26.495 meters

- $2: \begin{cases} 1 : integral \\ 1 : answer \end{cases}$
- (b) Four hours after the storm began, the rate of change of the distance between the road and the edge of the water is increasing at a rate of 1.007 meters / hours².
- $2: \begin{cases} 1 : \text{interpretation of } f'(4) \\ 1 : \text{units} \end{cases}$
- (c) f'(t) = 0 when t = 0.66187 and t = 2.84038The minimum of f for $0 \le t \le 5$ may occur at 0, 0.66187, 2.84038, or 5.

3:
$$\begin{cases} 1 : \text{considers } f'(t) = 0 \\ 1 : \text{answer} \\ 1 : \text{justification} \end{cases}$$

$$f(0) = -2$$

$$f(0.66187) = -1.39760$$

$$f(2.84038) = -2.26963$$

$$f(5) = -0.48027$$

The distance between the road and the edge of the water was decreasing most rapidly at time t = 2.840 hours after the storm began.

(d)
$$-\int_0^5 f(t) dt = \int_0^x g(p) dp$$

$$2: \begin{cases} 1 : \text{integral of } g \\ 1 : \text{answer} \end{cases}$$

Work for problem 2(a)

Work for problem 2(b)

At 4 hours into the thousand, the rade at which the dictance between the road and the edge of the water was changing is increasing by 1.007 m/h2.

Do not write beyond this border.

Work for problem 2(c)

$$f'(0.662) = 0$$
 $\frac{1}{7.840}$ possible Min

$$f(0) = -7$$

 $f(2,840) = -2.270$
 $f(5) = -0.480$

Work for problem 2(d)

$$-8.505 + \int_0^t g(p) dp = 0$$

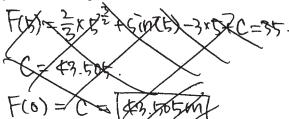

GO ON TO THE NEXT PAGE.

Work for problem 2(a)

Let Fit) be the autiderivative of fix).

-> F(t)= == == + cint -3++C.

Since F(0) = 35, C=35.

F(5) = 2x52+5(n(5)-3x85+35

-126.495m

Work for problem 2(b)

Do not write beyond this border.

fit) indicates the rate at which the distance between the road and the edge of the water was changing.

Therefore, f'(t) indicates the rate at which the changing hate of the distance changes.

f'(4)=1.007 means, the vate at which the changing changing vate of the distance between the road and the edge of the water is the change 1.007 m/hr² a when the storm lasted for 4 hours.

Continue problem 2 on page 7.

Work for problem 2(c)

The distance between the road and the edge of the water decreases most rapidly. (=) foot is minimum.

fet) minimum $\frac{1}{2}$ at the endpoint of [0,t] or of the point at which f'(t)=0, and f'(t)>0. f(0)=-3; f(t)=-0.480. $f'(t)=\frac{1}{2\pi}-5$ int =0. $\Rightarrow t=0.662, 2.84$

f(0.662) -- -1.372.

f(2.84) =-2.270.

is minimum at t=0 (just when the storm started)

Work for problem 2(d)

The distance that needs to be vestored is 35-26.495 - 8.505m.

GO ON TO THE NEXT PAGE.

Work for problem 2(a)
$$f(t) = \sqrt{t} + \cos t - 3$$

$$f'(t) = \sqrt{1 - \sin t}$$

$$d = 35 \quad t = 0$$

$$0 \le t \le t$$

$$\int_{0}^{\infty} f(t) dt = d(5) - d(0)$$
= -8.50536.

$$d(5) = d(0) - 8.505$$

$$= [26.495 m (3.d.p)]$$

Work for problem 2(b)
$$\int (4) = 1.007$$

f (4) means that doing the fourth hour of the storm, the rate of change of the rate of charge between the road and he edge of water

Work for problem 2(c)

of Lecreary most rapidly

= then magative max or alive of at (d)=f(t)

= f"(*)=0.

· L = 4.68775 or 42.42 4106

but ostes

=: t=4.638 (3.2.1.) horr.

= 4hours 41 min (nearest whole min) after storm starts.

Work for problem 2(d) $G(p) = \int_{a}^{b} f(t) dt$.

Solution $\int_{a}^{b} g(p)dt = \int_{a}^{b} f(t) dt$ Let S(p) = Sand pumped in at time <math>p.

Solution: S(p)

If (t) dt = \int g(p) dp

for Sand to be
restored to initial
condition.

AP® CALCULUS BC 2009 SCORING COMMENTARY (Form B)

Question 2

Sample: 2A Score: 9

The student earned all 9 points. Note that in part (d) the student's second line earned both points. The t variable that the student uses in the first integral was ignored. That t is in hours after the start of the storm, but the t variable in the student's second integral is in days.

Sample: 2B Score: 6

The student earned 6 points: 2 points in part (a), 1 point in part (b), 1 point in part (c), and 2 points in part (d). In part (a) the student's work is correct. The student does not include a definite integral but earned the integral point for correct antidifferentiation, use of the initial condition, and evaluation at 5. In part (b) the student earned the units point. Since the response does not include the word "increasing," the interpretation point was not earned. In part (c) the student earned the first point for considering f'(t) = 0. The student did not earn the answer point due to evaluation errors and was not eligible for the justification point. In part (d) the student's boxed equation earned both points.

Sample: 2C Score: 3

The student earned 3 points: 2 points in part (a), no points in part (b), no points in part (c), and 1 point in part (d). In part (a) the student's work is correct. In part (b) the response does not include the word "increasing" or any units. In part (c) the student is seeking a maximum value rather than a minimum value. The student considers f''(t) = 0 instead of f'(t) = 0. In part (d) the student earned the point for the integral of g in spite of using the same name for the upper limit of integration and the variable of integration. The answer point was not earned since the response lacks a negative sign in the integral equation.
