### **The College Board**

The College Board is a not-for-profit membership association whose mission is to connect students to college success and opportunity. Founded in 1900, the College Board is composed of more than 5,700 schools, colleges, universities and other educational organizations. Each year, the College Board serves seven million students and their parents, 23,000 high schools, and 3,800 colleges through major programs and services in college readiness, college admission, guidance, assessment, financial aid and enrollment. Among its widely recognized programs are the SAT<sup>®</sup>, the PSAT/NMSQT<sup>®</sup>, the Advanced Placement Program<sup>®</sup> (AP<sup>®</sup>), SpringBoard<sup>®</sup> and ACCUPLACER<sup>®</sup>. The College Board is committed to the principles of excellence and equity, and that commitment is embodied in all of its programs, services, activities and concerns.

FREE-RESPONSE QUESTIONS (Form B)**

**ENGLISH LANGUAGE AND COMPOSITION**

**SECTION II**

**Total time—2 hours**

**Question 1**

(Suggested time—40 minutes. This question counts for one-third of the total essay section score.)

**Directions:** The following prompt is based on the accompanying six sources.

This question requires you to synthesize a variety of sources into a coherent, well-written essay. When you synthesize sources, you refer to them to develop your position and cite them accurately. *Your argument should be central; the sources should support the argument. Avoid merely summarizing sources.*

Remember to attribute both direct and indirect references.

**Introduction**

In much of the world, the time that regulates our lives is altered by daylight saving time. Each year, we set our clocks back an hour in the fall and then move them forward an hour in the spring. This annual shift is thought to have been invented by Benjamin Franklin, who in 1784 wrote a letter to a French journal suggesting that Parisians could economize on candles if they simply woke up earlier during the summer. Daylight saving time was adopted by the United States in the twentieth century and is regulated by the federal government. Even though daylight saving time has been widely adopted, it still has detractors.

**Assignment**

Read the following sources (including the introductory information) carefully. **Then synthesize at least three of the sources into an essay that evaluates daylight saving time and offers a recommendation about its continued use.**

You may refer to the sources by their titles (Source A, Source B, etc.) or by the descriptions in parentheses.

- Source A (“Extra!”)
- Source B (Longley)
- Source C (Prerau)
- Source D (graph)
- Source E (O’Connor)
- Source F (Kotchen)

“Extra!: Daylight-Saving Time.” *CNN.com*. Cable News Network, 7 March 2007. Web. 8 Aug. 2007.

*The following is excerpted from an article on a news Web site.*

**1918** - The U.S. first adopts daylight-saving time, in the same act that created standard time zones, in an effort to save energy during World War I. It didn't prove popular, and, as a result, it was repealed the following year.

**1942** - President Franklin D. Roosevelt instituted “war-time,” a year-round daylight-saving time to save energy during World War II. After the year-round shift ended in 1945, many states adopted their own summer time changes.

**1966** - Congress established a national pattern for summer time changes with the Uniform Time Act. The act came in response from the transportation industry, which demanded consistency across time zones. The U.S. Department of Transportation now oversees time changes in the United States.

**1973** - An oil embargo by the Organization of Petroleum Exporting Countries led Congress to enact a test period of year-round daylight-saving time in 1974 and 1975. The test period was controversial; it ended after complaints that the dark winter mornings endangered children traveling to school. The U.S. returned to summer daylight-saving time in 1975.

**1986** - The Federal law is amended to start daylight-saving time on the first Sunday in April, beginning in 1987. The ending date of daylight-saving time was never changed, and remained the last Sunday in October through 2006.

**2005** - On August 8, President Bush signs the Energy Policy Act of 2005 into law. Part of the act will extend daylight-saving time starting in 2007, from the second Sunday in March to the first Sunday in November.

**2007** - Daylight-saving time begins on Sunday, March 11 and ends on Sunday, November 4.

Longley, Robert. "Energy Bill Would Extend Daylight Savings Time." *About.com*. The New York Times Company, 2008. Web. 17 Aug. 2009.

*The following is excerpted from an online article.*

**An extra month of “synthetic sunshine” every year**

Love it or hate it, America’s annual observance of daylight savings time would be extended one additional month under a provision of the massive Energy Policy Act of 2005. . . .

Daylight Saving Time—for the U.S. and its territories—is **NOT** observed in Hawaii, American Samoa, Guam, Puerto Rico, the Virgin Islands, the Eastern Time Zone portion of the State of Indiana, and by most of Arizona (with the exception of the Navajo Indian Reservation in Arizona). These states and territories remain on their local “standard” time throughout the year. . . .

Theory has it that daylight savings time promotes energy conservation. . . . Studies done in the 1970s by the U.S. Department of Transportation show that America’s electricity usage is reduced by about one percent during each day that daylight savings time is in effect.

**Also in the Energy Bill**

Other major provisions of the Energy Policy Act of 2005 include the allowance of oil drilling in an Alaska wildlife refuge and the creation of policies to shield makers of gasoline additives from future water contamination lawsuits.

The bill also provides \$12 billion in tax breaks and subsidies for energy companies . . . .

Prerau, David. *Seize the Daylight: The Curious and Contentious Story of Daylight Saving Time*. New York: Thunder's Mouth, 2005. Print.

*The following is excerpted from a book about daylight saving time.*

Using a variety of analytical techniques, the DOT [United States Department of Transportation] study assessed the impacts of DST [daylight saving time] in March and April and concluded that “modest overall benefits” might be realized in three primary areas—energy conservation, traffic safety, and reduced crime—by use of an eight-month DST system (March through October) rather than the Uniform Time Act’s six-month DST system (May through October).

Most subsequent studies of the effects of daylight saving time, performed in the United States, Britain, France, Israel, Mexico, New Zealand, and other countries, have produced somewhat similar results to the DOT study, especially with regard to the benefits of DST for energy conservation and traffic safety. . . . The DOT concluded that the total electricity savings associated with DST amounted to about 1 percent in spring and fall, corresponding to national savings of forty to fifty megawatt hours per day.

DST also might affect home heating, air conditioning, and other forms of energy consumption. For example, the extra hour of light in the evening could cause an increase in recreational and shopping travel by automobile (and therefore an increase in gasoline consumption) that might not be offset by a corresponding decrease in the morning. On the other hand, more outdoor activities might save energy by decreasing the use of TV sets and appliances. The DOT did not detect any significant DST impact on these areas. . . .

Another area of DST impact is crime reduction. People generally feel safer in the daylight, and many types of crime are believed to be influenced by lighting conditions. For example, more light in the evening decreases the opportunity for street crime against people returning home from work. The DOT study found that violent crime in Washington, D.C., was reduced by 10 to 13 percent during periods of daylight saving time. . . .

The issue of DST remained quiescent in the U.S. for almost twenty years. But in the spring of 2005, with oil prices soaring and U.S. energy consumption growing, Congressmen Fred Upton of Michigan and Edward Markey of Massachusetts proposed an amendment to a mammoth Energy Policy bill that provided for a two-month extension to the daylight saving time period. . . .

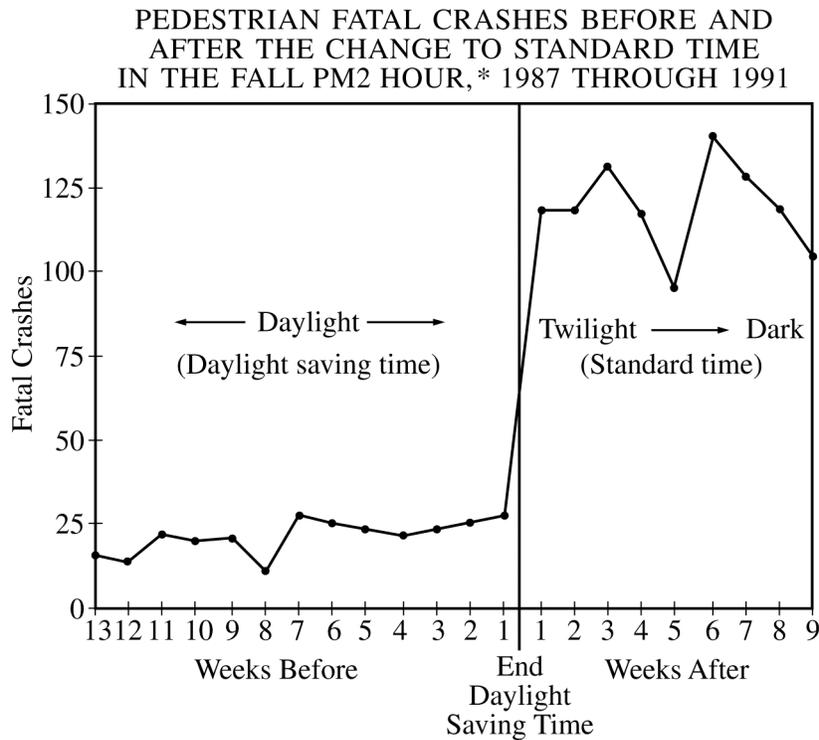

The Upton-Markey amendment was passed by the House of Representatives by voice vote with general acceptance. However, when the proposal reached the Senate, some opposition surfaced, primarily from a new quarter, the U.S. airlines. The airlines had never before played a major role in the daylight saving time debate, but they were now concerned that the DST extension would put the U.S. significantly out of sync with the time in foreign countries. A two month extension would, for example, result in seven or eight weeks each year when the U.S. had DST while Europe did not. At many foreign airports, U.S. carriers have established fixed landing and takeoff time “slots” for which they cannot make short-term changes. Having to keep to these time slots during the U.S. DST extension would cause significant disruption to the airlines’ schedules, and they anticipated a loss of many millions of dollars due to scheduling problems and lost connections for overseas flights.

O'Connor, Anahad. "Really? The Claim: Daylight Saving Time Can Affect Your Health." *New York Times*. New York Times, 10 Mar. 2009. Web. 17 Aug. 2009.

*The following is an online article from a national newspaper.*

**THE FACTS**

Daylight saving time, which began this week in most of the United States, has long been promoted as a way to save energy. Whether it does is still a matter of debate. But it does seem clear from studies that a one-hour time adjustment can have unintended health consequences.

It seems that when the clock is moved forward or back one hour, the body's internal clock—its circadian rhythm, which uses daylight to stay in tune with its environment—does not adjust. In a study of 55,000 people, for example, scientists found that on days off from work, subjects tended to sleep on standard time, not daylight time: their waking hour followed the seasonal progression of dawn.

In other studies, scientists tracked large groups of people for eight weeks at a time as they made the transitions to daylight time in spring and to standard time in autumn. They found that in spring, people's peak activity levels were more in tune with their body clock than with the actual clock. Studies suggest that this disconnect between body time and clock time can result in restlessness, sleep disruption and shorter sleep duration. Other studies have suggested links between time change and increases in heart attacks, suicides and accidents, though scientists say more study is needed.

**THE BOTTOM LINE**

Daylight saving time is associated with sleep disruptions and possibly more serious consequences.

Kotchen, Matthew J., and Laura E. Grant. "Does Daylight Saving Time Save Energy? Evidence from a Natural Experiment in Indiana" [Working Paper 14429]. *NBER Working Paper Series*. National Bureau of Economic Research, Oct. 2008. Web. 17 Aug. 2009.

*The following is excerpted from a working paper published by the National Bureau of Economic Research.*

The history of DST has been long and controversial. Throughout its implementation during World Wars I and II, the oil embargo of the 1970s, more consistent practice today, and recent extensions, the primary rationale for DST has always been the promotion of energy conservation. Nevertheless, there is surprisingly little evidence that DST actually saves energy. This paper takes advantage of a unique natural experiment in the state of Indiana to provide the first empirical estimates of DST effects on electricity consumption in the United States since the mid-1970s. The results are also the first-ever empirical estimates of DST's overall effect.

Our main finding is that—contrary to the policy's intent—DST results in an overall increase in residential electricity demand. Estimates of the overall increase in consumption are approximately 1 percent and highly statistically significant. We also find that the effect is not constant throughout the DST period: there is some evidence for an increase in electricity demand at the spring transition into DST, but the real increases come in the fall when DST appears to increase consumption between 2 and 4 percent. These findings are generally consistent with simulation results that point to a tradeoff between reducing demand for lighting and increasing demand for heating and cooling. According to the dates of DST practice prior to 2007, we estimate a cost to Indiana households of \$9 million per year in increased electricity bills. Estimates of the social costs due to increased pollution emissions range from \$1.7 to \$5.5 million per year.

FREE-RESPONSE QUESTIONS (Form B)

Question 2

(Suggested time—40 minutes. This question counts for one-third of the total essay section score.)

The passage below is from *The Horizontal World*, Debra Marquart’s 2006 memoir about growing up in North Dakota. Read the passage carefully. Then, in a well-written essay, analyze the strategies Marquart uses to characterize the upper Midwest.

Line Driving west from Fargo on I–94, the freeway that  
cuts through the state of North Dakota, you’ll  
encounter a road so lonely, treeless, and devoid of  
rises and curves in places that it will feel like one  
5 long-held pedal steel guitar note. If your tires are in  
proper alignment, you’ll only need to tap your  
steering wheel to keep your car on a straight-ahead  
path.

10 Now you are driving deep into the square states.  
This is the way I recently heard a comedian describe  
the column of states that holds down the center of the  
country—the Dakotas, Nebraska, Kansas, Oklahoma  
—a region that spawns both tornadoes and  
Republicans.

15 TV news anchors often hail from this part of the  
world, as do the most innocent female characters in  
movies and prime-time TV dramas. Being blond,  
fresh-faced, and midwestern makes their descent  
into ruthless behavior in places like Los Angeles  
20 and New York all the more tragic.

“We are the folks presidents talk to when times  
require,” Sylvia Griffith Wheeler wrote in her poem  
“Earthlings.” Networks make up women to look like  
us “who will not trade their bleaches, soaps for  
25 anything.”

This is a region that contains both Garrison  
Keillor’s Lake Wobegon<sup>1</sup> (“where all the women are  
strong, all the men are good-looking, and all the  
children are above average”) and the Coen Brothers’  
30 *Fargo*,<sup>2</sup> the macabre land of murder-by-wood-  
chipper. Aside from this myth making, the Midwest  
is a place that’s been considered devoid of stories, a  
flyover region one must endure to get to more  
interesting places.

35 Despite its easy inclines and farmable plains, the  
region was equally unimpressive to its earliest  
assessors. In the 1820s, Edwin James, the official

chronicler of Major Stephen Long’s survey,  
declared the region “a dreary plain, wholly unfit for  
cultivation,” and, of course, “uninhabitable by a  
40 people depending upon agriculture for subsistence.” It  
was Edwin James who dubbed the area between the  
Mississippi and the Rockies the Great American  
Desert, an indignity from which the region has  
45 struggled to recover ever since.

This is the Heartland, the place where Jefferson’s  
idea of a rectangular cadastral survey, the land grid  
system outlined in the Land Ordinance of 1785, found  
its most perfect confluence of longitude, latitude, and  
50 countryside so well behaved that it laid itself down in  
neat, even squares for the surveyor’s instruments.

Soon enough, as the surveying expedition moved  
west, the neatness of the grid was foiled by steep  
valleys, rivers, foothills, and mountains, but here in  
55 the monotonous square states, the survey subdivided  
the land easily into square upon square, each  
measuring six miles by six miles. What followed,  
Richard Manning observed in *Grassland*,<sup>3</sup> was a war  
on roots: “The place was a mess, and it became a  
60 young nation’s job to fix it with geometry,  
democracy, seeds, steam, steel, and water.”

Such is the situation all of my great-grandparents  
and grandparents encountered when they arrived  
between the years of 1885 and 1911. They traveled to  
65 the Midwest by train to what was then the end of the  
line—Eureka, South Dakota. *Eureka*—from the  
Greek word *heureka*, meaning “I have found it”—is  
reported to have been the word that Archimedes cried  
when he found a way to test the purity of Hiero’s  
70 crown. My grandparents wouldn’t have known the  
etymology of the word, but they would have felt it,  
the anticipation, as they waited along with the other  
immigrants from Russia to receive their allotments of  
land.

<sup>1</sup> a fictitious town in Keillor’s radio show, *A Prairie Home Companion*

<sup>2</sup> a 1996 film produced and directed by Joel and Ethan Coen

<sup>3</sup> a nonfiction book about the American prairie published in 1995

**2010 AP<sup>®</sup> ENGLISH LANGUAGE AND COMPOSITION  
FREE-RESPONSE QUESTIONS (Form B)**

**Question 3**

(Suggested time—40 minutes. This question counts for one-third of the total essay section score.)

The first Buy Nothing Day—a day on which people are urged to purchase no goods—was organized in Canada in 1992 as a way to increase awareness of excessive consumerism. A Buy Nothing Day has been held yearly since then in many nations. An online article, “Buy Nothing Day: 2006 Press Release,” urged worldwide acceptance of taking a “24-hour consumer detox as part of the 14th annual Buy Nothing Day” in order to “expose the environmental and ethical consequences of overconsumption” (“Buy Nothing Day,” courtesy *Adbusters*, [www.adbusters.org](http://www.adbusters.org)).

Consider the implications of a day on which no goods are purchased. Then write an essay in which you develop a position on the establishment of an annual Buy Nothing Day. Support your argument with appropriate evidence.

**END OF EXAM**
