AP® Macroeconomics  
2010 Free-Response Questions

The College Board

The College Board is a not-for-profit membership association whose mission is to connect students to college success and opportunity. Founded in 1900, the College Board is composed of more than 5,700 schools, colleges, universities and other educational organizations. Each year, the College Board serves seven million students and their parents, 23,000 high schools, and 3,800 colleges through major programs and services in college readiness, college admission, guidance, assessment, financial aid and enrollment. Among its widely recognized programs are the SAT®️, the PSAT/NMSQT®️, the Advanced Placement Program®️ (AP®️), SpringBoard®️ and ACCUPLACER®️. The College Board is committed to the principles of excellence and equity, and that commitment is embodied in all of its programs, services, activities and concerns.

Visit the College Board on the Web: www.collegeboard.com.
AP Central is the official online home for the AP Program: apcentral.collegeboard.com.
1. Assume that the United States economy is currently in long-run equilibrium.
   
   (a) Draw a correctly labeled graph of aggregate demand and aggregate supply and show each of the following.
   
   (i) The long-run aggregate supply curve
   
   (ii) The current equilibrium output and price levels, labeled as \( Y_E \) and \( P_LE \), respectively
   
   (b) Assume that the government increases spending on national defense without raising taxes.
   
   (i) On your graph in part (a), show how the government action affects aggregate demand.
   
   (ii) How will this government action affect the unemployment rate in the short run? Explain.
   
   (c) Assume that the economy adjusts to a new long-run equilibrium after the increase in government spending.
   
   (i) How will the short-run aggregate supply curve in the new long-run equilibrium compare with that in the initial long-run equilibrium in part (a)? Explain.
   
   (ii) On your graph in part (a), label the new long-run equilibrium price level as \( P_L2 \).
   
   (d) In order to finance the increase in government spending from part (b), the government borrows funds from the public. Using a correctly labeled graph of the loanable funds market, show the effect of the government’s borrowing on the real interest rate.
   
   (e) Given the change in the real interest rate in part (d), what is the impact on each of the following?
   
   (i) Investment
   
   (ii) Economic growth rate. Explain.

2. A drop in credit card fees causes people to use credit cards more often for transactions and demand less money.

   (a) Using a correctly labeled graph of the money market, show how the nominal interest rate will be affected.
   
   (b) Given the interest rate change in part (a), what will happen to bond prices in the short run?
   
   (c) Given the interest rate change in part (a), what will happen to the price level in the short run? Explain.
   
   (d) Identify an open-market operation the Federal Reserve could use to keep the nominal interest rate constant at the level that existed before the drop in credit card fees. Explain.
3. A United States firm sells $10 million worth of goods to a firm in Argentina, where the currency is the peso.
   (a) How will the transaction above affect Argentina’s aggregate demand? Explain.
   (b) Assume that the United States current account balance with Argentina is initially zero. How will the transaction above affect the United States current account balance? Explain.
   (c) Using a correctly labeled graph of the foreign exchange market for the United States dollar, show how a decrease in the United States financial investment in Argentina affects each of the following.
      (i) The supply of United States dollars
      (ii) The value of the United States dollar relative to the peso
   (d) Suppose that the inflation rate is 3 percent in the United States and 5 percent in Argentina. What will happen to the value of the peso relative to the United States dollar as a result of the difference in inflation rates? Explain.
