

AP[®] Human Geography 2001 Sample Student Responses

The materials included in these files are intended for non-commercial use by AP teachers for course and exam preparation; permission for any other use must be sought from the Advanced Placement Program. Teachers may reproduce them, in whole or in part, in limited quantities, for face-to-face teaching purposes but may not mass distribute the materials, electronically or otherwise. These materials and any copies made of them may not be resold, and the copyright notices must be retained as they appear here. This permission does not apply to any third-party copyrights contained herein.

These materials were produced by Educational Testing Service (ETS), which develops and administers the examinations of the Advanced Placement Program for the College Board. The College Board and Educational Testing Service (ETS) are dedicated to the principle of equal opportunity, and their programs, services, and employment policies are guided by that principle.

The College Board is a national nonprofit membership association dedicated to preparing, inspiring, and connecting students to college and opportunity. Founded in 1900, the association is composed of more than 3,900 schools, colleges, universities, and other educational organizations. Each year, the College Board serves over three million students and their parents, 22,000 high schools, and 3,500 colleges, through major programs and services in college admission, guidance, assessment, financial aid, enrollment, and teaching and learning. Among its best-known programs are the SAT[®], the PSAT/NMSQT[™], the Advanced Placement Program[®] (AP[®]), and Pacesetter[®]. The College Board is committed to the principles of equity and excellence, and that commitment is embodied in all of its programs, services, activities, and concerns.

Write in the box the number of the question you are answering on this page as it is designated in the examination.

Rostow's model is one that predicts that all countries can eventually ~~become~~ become developed. However, there are many reasons that this is not necessarily true for all countries. Economically, less developed countries depend on more developed ones. Rostow believed that this was a "helping hand" that could help pull less developed countries to a higher level of development, but they become dependent on that assistance so they cannot help themselves. For example, NAFTA has created many new jobs in Mexico. These new jobs will help the Mexican economy, but they will never be able to get away from this help to become an independent economic power. Colonial transportation networks also show flaws in Rostow's model. In Sub-Saharan Africa, the colonial powers, mainly Great Britain, built many railroads to help with transportation. Rostow would again ~~see this~~ see this as a way to help less developed countries develop. In reality, the railroads cause more problems than they solve. That is because they were designed to transport over the whole of Africa. Now Africa is many smaller countries. This means that in order to transport goods many landlocked African countries, ~~like~~ like Zimbabwe, have to travel through unstable states to get to an ocean port. Also,

The railroad system was designed for extraction. The railroads generally go from areas with many resources to ocean ports. This means that the railroads are virtually useless when it comes to transporting goods between cities. Thus Rostow's model is again not useful in predicting development. Finally, local social and class structures can slow development. Rostow assumes that all countries can develop, but he doesn't take into account taboos that can make it ~~even~~ very difficult to change socially and economically. In India, the caste system prevents many qualified people from contributing their full potential. People on the lower steps of the castes can not necessarily do what is best for the country. This inefficiency makes it hard for countries like India to develop, because they have such a disadvantage. Rostow's model is a poor one because it fails to take into account the many variables that can come into play.

Write in the box the number of the question you are answering on this page as it is designated in the examination.

The liberal model of development, asserting that inevitable economic change occurs in each area, does not factor in very important aspects of human society.

Because of the relationship between "developed" and "developing" nations, the Rostow model is not very useful in predicting development.

Colonial transportation networks, the by-product of mercantilism, gave character to the economic face of the world. Some places, like the Caribbean, became heavily dependent on export crops (coffee and sugar) because of their role in colonial trade.

Since being cut from the motherland, however, these countries are unable to support themselves, because they had long been a spoke in the wheel of mercantilism and never were given the resources nor the social conditions for development.

The emerging global ~~economic~~ economy serves to perpetuate underdevelopment. As supra-national organizations such as the World Trade Organization, European Union, and proposed North American Free Trade zone take hold, demands are made for absence of tariffs in order to receive international aid. Therefore, not only are countries reliant ~~at~~ on more developed countries for aid, but also have no import barriers to protect their weak and growing industries. Furthermore, the desire of countries to trade with underdeveloped countries can lead to ~~instability~~ instability or dependence. The African nation of Sierra Leone, for example,

Write in the box the number of the question you are answering on this page as it is designated in the examination.

is torn by conflict over possession of the diamond mines because of the Western demand for jewelry. This conflict has caused mass murder and ~~the~~ chaos, certainly preventing progress.

Finally, cultural differences exist that provide barriers to liberal economic development. For example, Nigeria in Sub-Saharan Africa is a nation of almost innumerable languages. Therefore, centralized economic development is near impossible because of communication barriers. In addition, cultural and social divisions, such as those seen in India, can hinder economic cooperation and the opening up of an economy. This is the foundation of the Core-Periphery model: ~~that~~ the differences between the have-and have-nots are far too great and well-entrenched for nations to overcome their dependency.

The 5 stages of economic development correlate directly with the country's role in world economy. The United States, undoubtedly identified within the fifth and highest stage, is also undoubtedly a major world economic power. On the contrary, Sub-Saharan Africa is mixed in the first stage, that of the traditional model, and also, correspondingly, is not a major economic power.

Because of the fact that this is Rowston's model for economic development, not many parallels can be drawn between it and cultural differences associated with the model. One thing that may occur as a country ascends through the five stages may be an increasing amount of cultural assimilation. As a country becomes more involved in worldly business matters, cultural ideas from established fifth stage regions may begin to diffuse. As Latin America begins its takeoff the affect of the United States presence in economic matter is shown in Americanization.

As Japan and other South Asian countries like Singapore realized as they climbed the ladder to the fifth stage of Rowston's model they realized the necessity for efficient infrastructure. The loading docks of harbors are ready-made to put freight directly on to trains where it can then be distributed with utmost efficiency. This planning must be a part of the earlier stages to facilitate full growth into a stage five society. An identification as a member of the fifth stage certifies that these specifications have been met.
