- SAIL Lab was no longer funded under Perkins guidelines
 - ❑ SAIL Lab services still needed since:
 - ✓ 75% MDC students are not college-ready & 55% retake placement test
- Created S.O.C.R.A.T.E.S. Tutoring Center – *fee \$95.00*
 - ❑ *Student Oriented Center for Retention & Advancement through Technology & Educational Support*
 - ✓ 60 days access to software/individualized instruction (A+dvancer)
 - ✓ 3 hrs tutoring (face-to-face and/or online)
 - ✓ English Language Skills, Reading, and Mathematics
- **Title III Grant funding opportunity** - *Strengthening Institutions Program*
 - ❑ *strengthen academic programs and improve the academic success of students at high risk of attrition or failing to graduate on time by:*
 - ✓ *implementing and improving student services, tutoring, and counseling programs*
 - ✓ *S.O.C.R.A.T.E.S. concept (fee based services) and data used for grant submission and institutionalization plan after grant funding ends*

 - ❑ Aprx. 36,000 students (55%) re-test (seek placement test preparation)
- **Need to increase retention & graduation rates**
 - ❑ 45 % earn degrees and 41 % earn certificates within 6 years (NCES ,2003)
- **Need to consider the different learning styles in today’s CC students**

The screenshot shows a Windows Internet Explorer browser window displaying a math problem. The browser's address bar shows the URL <http://www.advancerlearning.com/adv/adminframeset.html?customer=Advancer>. The page content includes a navigation bar with 'STUDY GUIDE', 'HELP', and 'EXIT' buttons. The main text asks: 'Choose the expression that correctly uses the distributive property to remove the parentheses from this expression.' Below this, the expression $3(n - 7) + 4(n + 2)$ is shown. Four possible answers are provided in rectangular boxes: $3n - 21 + 4n + 8$, $3n - 7 + 4n + 8$, $3n - 7 + 4n + 2$, and $3n - 21 + 4n + 2$. To the right of the browser window, a document editor window titled 'Document4 - I...' is open, showing the expression $3(n-7) + 4(n+2)$ typed into the text area. The Windows taskbar at the bottom shows the Start button, several open applications (Internet Explorer, Microsoft Office, Document4, GoToMeeting), and the system clock displaying 2:34 PM.

Choose the expression that correctly uses the distributive property to remove the parentheses from this expression.

Purpose of project:

Miami Dade College-Kendall Campus, in collaboration with Inter American Campus and Medical Center Campus, will implement and improve student services, and **tutoring programs**.

The goal:

To strengthen academic programs by increasing passing rates, retention rates, and on-time graduation rates among high-risk students.

Objectives in the five-year project period:

1. Provide, a minimum of **4,500** at-risk students with intensive assessment, tutoring, and other student services.
2. Increase total passing rates among at-risk students by **12** percentage points.
3. Increase retention rates among at-risk students by **10** percentage points.
4. Increase the percentage of at-risk students graduating from degree programs within three years by **nine** percentage points.

Strategies to achieve these objectives include:

- (1) identifying at-risk students earlier in their programs using proven computer-based and outcome-based learning assessment methods,
- (2) implementing new programs to **increase access to online and face-to-face** student services and **tutoring** among at-risk students,
- (3) more effectively guiding at-risk students into **tutoring**, and other student services.

Hi Ben. Please help me factor the expression

$$x^3 + 3x^2 + 2x + 6$$

Greetings John.
Take it one step at a time.
If the polynomial is already in descending order, what is the next step?

I think I need to factor next
Correct. What is the common monomial once you factor out the first two terms then the next two terms?

I get $x(x^2 + 3) + 2(x + 3)$
Excellent. Notice the common factor, $(x+3)$. How would you put the like terms together using the distributive property?

Is it $(x^2 + 2)(x + 3)$?

Hello Louis, this is Sylvia, and I have a question for you. Can you please help me factor this expression:

$$3X^2 - 3X - 18$$

Sure. First, take the GCF out: $3(X^2 - X - 6)$
