SAT® Data

SAT Subject Tests ${ }^{\text {TM }}$ Data
Demographic and Academic Information
College Plans

## The class of 2010 included over $\mathbf{1 . 5 9}$ million college-bound students who took the SAT®.

- The data in this report includes students in the class of 2010 who the the SAT through March 2010.
- Seniors who tested for the first time in May and June are not included in the detailed analyses.
- In total, 1,597,329 million college-bound seniors in the class of 2010 took the SAT.

## The SAT ${ }^{\circledR}$ Program

The SAT® (formerly known as the SAT® I: Reasoning Test) assesses student reasoning based on knowledge and skills developed by the students in their course work. The SAT Subject Tests ${ }^{\text {TM }}$ (formerly known as SAT II: Subject Tests) are a series of one-hour, mostly multiple-choice tests that measure how much students know about a particular academic subject and how well they can apply that knowledge. Most students also complete the optional SAT Questionnaire (formerly known as the Student Descriptive Questionnaire) when they register to take SAT Program tests, providing valuable contextual information to aid in interpreting and understanding individual and group scores. College-Bound Seniors 2010 includes students who tested through March 2010.t

## Using This Report

College-Bound Seniors presents data for high school graduates in the year 2010 who participated in the SAT Program. Students are counted only once, no matter how often they tested, and only their latest scores and most recent SAT Questionnaire responses are summarized. Because the accuracy of self-reported information has been documented and the college-bound population is relatively stable from year to year, SAT Questionnaire responses from these students can be considered accurate. Therefore, you can use this report to:

- Interpret scores of individual students within the broader context of data aggregated across groups of collegebound seniors.
- Study changes over time in the characteristics of students taking SAT tests.
- Look at educational and demographic changes in this population, along with changes in test performance.

Keep in mind, however, that:

- Relationships between test scores and other factors such as educational background, gender, racial/ethnic background, parental education, and household income are complex and interdependent.
- These factors do not directly affect test performance; rather, they are associated with educational experiences both on tests such as the SAT and in schoolwork.
- Occasional updates are made to the optional Student Questionnaire to improve student response rates. Fluctuations from year to year should be interpreted with appropriate consideration.
- Not all students in a high school, school district, or state take the SAT. Since the population of test-takers is self-selected, using aggregate SAT scores to compare or evaluate teachers, schools, districts, states, or other educational units is not valid, and the College Board strongly discourages such uses.
- Interpreting SAT scores for subgroups requires unique considerations. The most significant factor to consider in interpreting SAT scores for any group, or subgroup, of test-takers is the proportion of students taking the test. For example, if state data are being
considered, it is appropriate to recognize that in some states there are lower participation rates. Typically, test-takers in these states have strong academic backgrounds and apply to the nation's most selective colleges and scholarship programs. For these states, it is expected that the SAT mean scores reported for students will be higher than the national average.

## Statistical Definitions

The following terms are used throughout this report. For more statistical information, visit the College Board Web site at www.collegeboard.com.

## Mean

The mean is the arithmetic average.

## Percentile

The percentile, also called the percentile point, is the point on the measurement scale below which a specified percentage of scores falls. The 25th, 50th, and 75th percentile points are often reported for large data sets. The 50th percentile point is also called the median and, like the mean, is an average and a good indicator of the center of the distribution of scores. Comparing the 25th and 75 th percentile points gives an idea of the range of scores in the populations reported in this document. Like the standard deviation, the difference between the scores associated with the 75th and 25th percentiles is an indication of the variability of the scores in a particular sample.

## Scaled score

A scaled score is a score that has been converted from the raw score (number of questions answered correctly minus a fraction of the incorrect answers) for reporting. The SAT Program uses the 200 to 800 point scale.

## Standard deviation (SD)

The standard deviation (SD) is a measure of the variability of a set of scores. If test scores cluster tightly around the mean score, as they do when the group tested is relatively homogeneous, the standard deviation is smaller than it would be with a more diverse group and a greater scatter of scores around the mean.

## The College Board: Inspiring Minds ${ }^{\top}{ }^{\mathbf{M}}$

The College Board is a not-for-profit membership association whose mission is to connect students to college success and opportunity. Founded in 1900, the association is composed of more than 5,600 schools, colleges, universities, and other educational organizations. Each year, the College Board serves seven million students and their parents, 23,000 high schools, and 3,800 colleges through major programs and services in college admissions, guidance, assessment, financial aid, enrollment and teaching and learning. Among its best-known programs are the SAT®, the PSAT/NMSOT®, and the Advanced Placement Program® ${ }^{\circledR}(A P ®)$. The College Board is committed to the principles of excellence and equity, and that commitment is embodied in all of its programs, services, activities and concerns.
+The data in this report includes students in the class of 2010 who took the SAT through March 2010. Seniors who tested for the first time in May and June are not included in the detailed analyses. In total, over 1.59 million college-bound seniors in the class of 2010 took the SAT.

## SAT® Data

Data in this report are for high school graduates in the year 2010. Information is summarized for seniors who took the SAT at any time during their high school years through March 2010. If a student took the test more than once, the most recent score is used.

Table 1: Overall Mean Scores

## SAT Trend Reporting Transition

The 1,597,329 SAT takers in the graduating class of 2010 include all students who took the SAT through June 2010. The SAT college-bound seniors trend data have historically included students who took the SAT at any point in high school through March of their senior year, by which time almost all college-bound students had taken the test. Over the last five years, the College Board has observed a trend in which more students are taking the SAT for the first time in May or June of their senior year. This population of college-bound students has grown into a significant segment of nearly 50,000 students in the graduating class of 2010. The College Board believes it is important to acknowledge these students to truly complete the 2010 college-bound seniors cohort.

In order to provide a more complete view of the college-going population, the official 2010 college-bound seniors cohort of almost 1.6 million includes all students who tested through June of their senior year. To maintain consistency and reliability of year-over-year comparisons, the 2010 trend data details shown in this report continue to reflect information on the student population who tested through March of their senior year. Beginning in 2011, SAT college-bound trend reports, group profile reports and all state profile reports will include students who took the SAT at any point in high school through June of their senior year.

The table below provides score information for the student group through March and through June.

| All Schools | 2010 |  |  |  | 2009 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Total Group | Students | Critical Reading | Math | Writing | Students | Critical Reading | Math | Writing |
| June Cohort | 1,597,329 | 500 | 515 | 491 | 1,573,110 | 499 | 514 | 492 |
| March Cohort | 1,547,990 | 501 | 516 | 492 | 1,530,128 | 501 | 515 | 493 |

As the table shows, mean scores for the full-year group that includes May and June test-takers are marginally lower than the mean scores for the March group. This difference is driven by the fact that the population of "late-starting" test-takers has lower mean SAT scores than the March cohort test-takers.

The College Board, with the high school counseling community as its partner, will also be encouraging even more students to participate in the college planning process earlier in their high school careers in order to maximize available student choices.

## Areas Served by College Board Regional Offices

## National Office

45 Columbus Avenue
New York, NY 10023-6992
212-713-8000
212-713-8255 (Fax)

## Middle States Regional Office

Three Bala Plaza East, Suite 501 Bala Cynwyd, PA 19004-1501
866-392-3019
610-227-2580 (Fax)

## Midwestern Regional Office
